Motorcycle Accessories for Safer Riding

Brake Light Flasher (for K1200 & K1600)

The brake light flasher kit connects to the center brake light on the K1200LT and K1600GTL trunk. It makes the brake light flash rapidly for about two seconds, and then it stays on without flashing for as long as the brake is applied. The cycle repeats every time the brake is applied. Easy installation. Specify bike when ordering (K1200LT shown at right).

Tip-Over Wing LED Strip Kit (for K1200)

This kit adds 15 amber LEDs to each K1200LT Tip-Over wing. The LEDs come pre-installed on a thin 30 cm long black strip. The LEDs act as both running lights and turn signals, making it easier for other vehicles to see the side of your bike and your intention to turn or change lanes.

Trunk Mounted LED Taillight and Turn Signals (for K1200)

This kit adds three LED strips to your K1200LT trunk, just below the lid. The upper strip goes all the way around the three visible sides and acts like a red running light. The two lower strips (they meet at the center of the trunk) act as left and right amber turn signals. Really lights up the back and rear sides of the bike.
